

M485SL & M486SL

HISTOSETTE® II

CASSETTES IN QuickLoad™ SLEEVES

Made of acetal polymer

Suitable for hoppers accepting plastic sleeves, these cassettes will load in cassette labeling instruments in one simple operation. Save time and money with these convenient stacks of 75 unique **Simport** cassettes. No more manual insertion, one cassette at a time. Just load the cassette sleeve in the hopper and you are ready for printing.

These specially designed cassettes belong to the worldwide known **Simport** Histosette® II Series. Molded from a special high density polymer, these cassettes keep specimens safely submerged in liquid and are totally resistant to the chemical action of histological solvents. The efficient flow-through slots maximize fluid exchange and ensure proper drainage.

Two types of cassettes are offered in order to suit your particular needs: a regular tissue cassette and a biopsy model designed to hold small biopsy samples securely during the embedding process. Anterior printing area is at a 45° angle, offering an unobstructed view of the writing surface and making the cassette perfectly suitable to be used with cassette labeling instruments.

The one-piece disposable plastic cover eliminates the need for reusable steel lids. It can be opened and closed as often as necessary and it always relocks without danger of specimen loss.

Each case contains 10 sleeves and 750 covers. Patent pending.

Available worldwide. For USA users, please contact a Simport Customer Service Representative.

These QuickLoad™ Sleeves are for use in automatic cassette labeling instruments.

M507SL MICROMESH

BIOPSY CASSETTES IN QuickLoad™ SLEEVES

Made of acetal polymer

Suitable for hoppers accepting plastic sleeves, these cassettes will load in cassette labeling instruments in one simple operation. Just load the 75-cassette QuickLoad™ sleeve in the hopper and you are ready for printing.

This modified version of the MICROMESH™ offers slightly larger (0.38 mm) square openings, and large anterior slots allowing for increased fluid exchange and faster sinking in liquids. No biopsy pads are necessary. These cassettes feature a recessed cover and a large square 27 mm compartment, perfect even for needle biopsies.

Molded from a special high density polymer, these cassettes keep specimens safely submerged in liquid and are totally resistant to the chemical action of histological solvents. The lid can be opened and closed as often as necessary and always relocks securely without danger of specimen loss. Large labeling areas are located on three sides of the cassettes. Anterior writing area is at a 45° angle to make the cassette more suitable to be used with automated cassette printed. Available in non-cytotoxic and non-metallic colors. Each case contains 10 sleeves. Patent pending.
